Frontend developer with 2 years of engineering experience at LTIMindtree, **promoted twice in 20 months. Cut manual regression effort ~40%** by designing automated test frameworks in Java + Selenium. Now building production-pattern React and React Native applications — three shipped in 2026 covering authentication, centralised state, navigation and offline persistence. B.E. Honours, E&TC with Data Science.

TECHNICAL SKILLS

Frontend	React.js, React Native, Expo, Expo Router, Redux Toolkit, React Navigation, Responsive Design, Component Architecture
Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3, Java
Backend	Node.js, Express.js, REST APIs
Tools	Git, GitHub, GitHub Copilot, VS Code, Netlify, JIRA
Testing	Selenium WebDriver, JUnit, Test Automation, Regression & Functional Testing
Concepts	SDLC / STLC, Agile / Scrum, CI/CD fundamentals, OOP, Data Science

FRONTEND PROJECTS

Movie App — React Native, Expo, Redux Toolkit, React Navigation <i>Personal project - github.com/Paras-pp/MovieApp</i>	Jun 2026
- Built a cross-platform mobile app in React Native with Expo for browsing and discovering movies, with user authentication, movie listings and multi-screen navigation. - Centralised authentication and movie data in Redux Toolkit, so session state stays consistent across every screen instead of being threaded through props. - Structured navigation with React Navigation (native stack) so users move between the auth flow and the browsing flow without losing state.	
Tic Tac Toe — React Native, Expo Router, Redux Toolkit, AsyncStorage <i>Personal project - github.com/Paras-pp/TicTacToe</i>	Jun 2026
- Built a React Native game on Expo Router handling real-time board state, turn logic and win detection. - Persisted scores and player progress with AsyncStorage so history survives app restarts. - Modelled board, turn and score state in Redux Toolkit for predictable updates and a single source of truth.	
Portfolio — React.js, Node.js, Netlify <i>Personal project - parasandita.netlify.app/</i>	May 2026
- Built and shipped a responsive portfolio site in React.js backed by a Node.js service. - Deployed on Netlify with continuous delivery from Git — every push to main ships to production automatically.	

PROFESSIONAL EXPERIENCE

LTIMindtree — Pune	Aug 2024 – Apr 2026
Software Engineer — Quality & Automation	Apr 2025 – Apr 2026
Quality Engineer	Nov 2024 – Apr 2025
Graduate Apprentice — Software Testing	Aug 2024 – Nov 2024
Built and maintained responsive web interfaces in React.js and JavaScript, integrating REST APIs for enterprise application delivery. Cut manual regression effort ~40% by designing and implementing automated test frameworks in Java + Selenium. - Built reusable test utilities and page-object models that removed duplicated code across suites and made tests cheaper to maintain as the application changed. - Wired automation into CI with data-driven testing and integration hooks, surfacing regressions during the sprint rather than at release. - Validated end-to-end functionality across web and API layers, and tracked defects in JIRA through to closure. - Reviewed defects with development teams during sprint reviews, catching issues earlier in the SDLC. - Used GitHub Copilot to speed up test script development and hold coding standards consistent across the QA codebase. - Contributed to internal knowledge-sharing sessions on automation frameworks.	

EDUCATION

B.E. (Honours) — Electronics & Telecommunication Engineering with Data Science <i>Dr. D. Y. Patil Institute of Technology, Pune (SPPU)</i>	2019 – 2023
